CSA1616 - DATA WAREHOUSING AND DATA MINING

Lab Experiments (12,13)

Name: Pravin R

Reg. No: 192421292

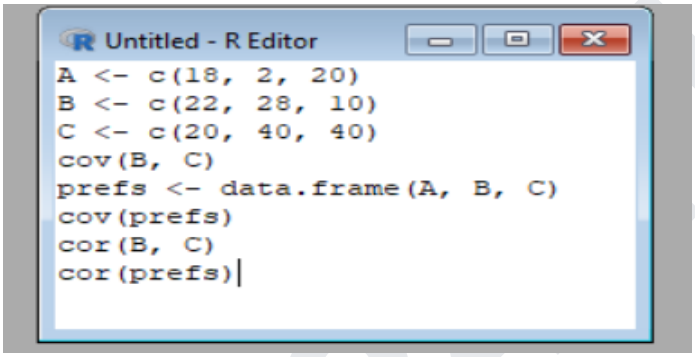

Date: 10/10/2026

Experiment - 12

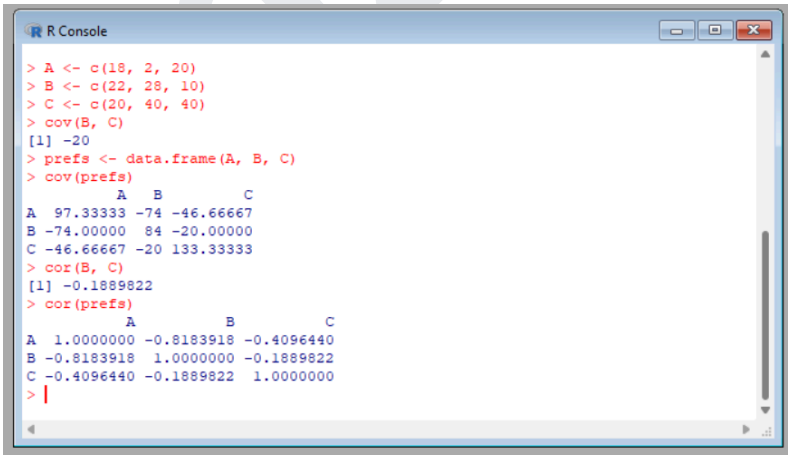

Aim:

To show the .Covariance and correlation Children of three ages are asked to indicate their preference for three photographs of adults.

Code:

Output:

Result:

It is executed successfully.

Experiment - 13

Aim:

To divide the given price data into equal-frequency bins, apply data smoothing (bin means & bin boundaries), and draw a histogram using R.

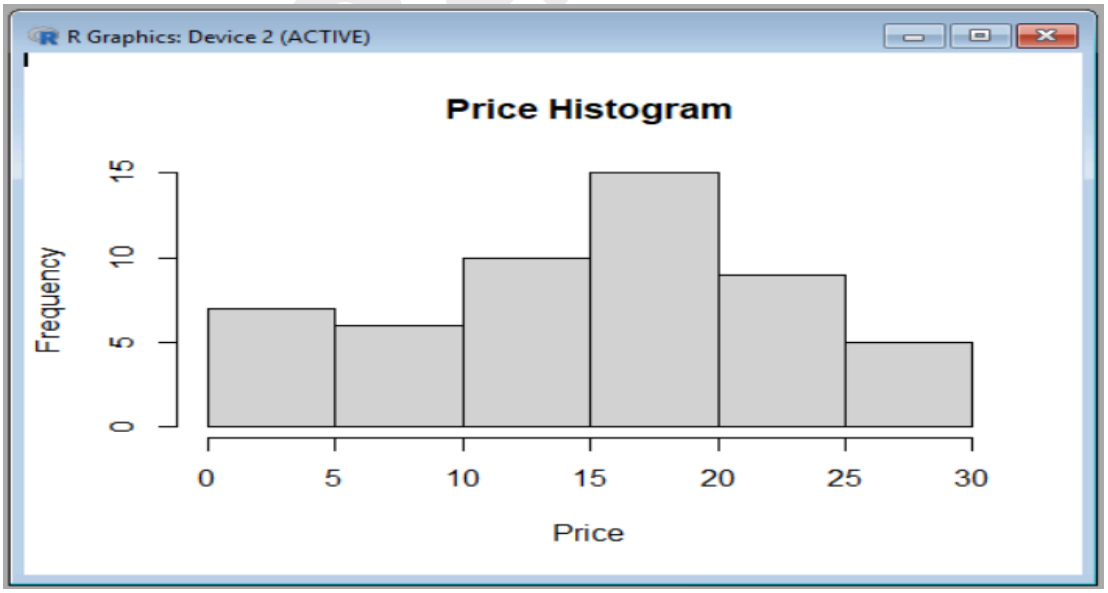

Code:

C:\Users\Dell\Documents\DataWarehousing Lab\DW Exp 12.R - R Editor

```
price <- c(1,1,5,5,5,5,5,8,8,10,10,10,10,12,14,14,14,
15,15,15,15,15,15,18,18,18,18,18,18,18,18,

20,20,20,20,20,20,20,21,21,21,21,25,25,25,
25,25,28,28,30,30,30)
n <- length(price)
bin_size <- n / 3
bins <- split(price, ceiling(seq_along(price)/bin_size))
bins
bin_means <- lapply(bins, function(b) rep(mean(b), length(b)))
bin_means
bin_boundary <- lapply(bins, function(b){
lower <- min(b)
upper <- max(b)
sapply(b, function(x)
if(abs(x-lower) < abs(x-upper)) lower else upper)
})
bin_boundary
hist(price, main="Price Histogram",
xlab="Price", ylab="Frequency")
```

Output:

Result:

It is executed successfully.
